

PlexMap | WebGIS

Complex data in a simple shape

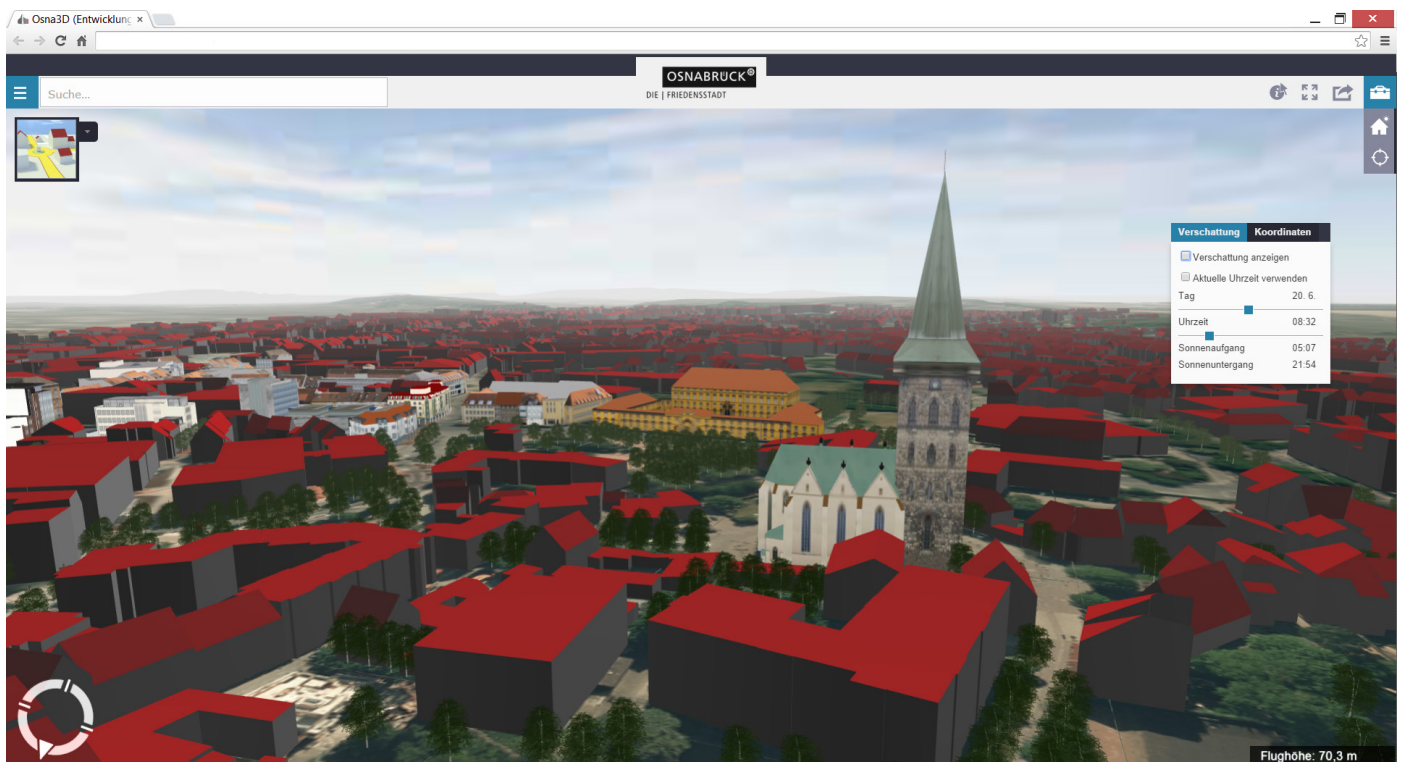

INTUITIVE USE
NATIVE 3D DISPLAY
HIGH-PERFORMANCE

Geoplex | PlexMap

What does PlexMap offer?

- Geoplex developed an innovative WebGIS which, despite of the complexity of the input data, has a modern, intuitive look & feel. The main features of PlexMap include its ease of use, the excellent scalability to both large areas and complex geometries and the native support of many common 3D formats without requiring additional plug-ins or applications.

Advantages of PlexMap

- **Direct display of 3D content without plug-in:** switch from two- to three-dimensional content with just one mouse click
- An easily understandable operating concept - even for non-experts
- High-performance presentation of large datasets, too
- Straightforward backend for easy user- and data management
- Use the Omni-Searchbox to find addresses, points of interest, datasets, toolbox functions, thematic maps and much more with just one input
- Mobile: Use PlexMap on your mobile devices!
- Comprehensive toolbox: editing, sketches, data export, coordinate transformations, shading analysis, WMS-/WFS import, print editor and much more
- Supported input formats: SHP, DXF, CityGML, WMS, WMF, Raster and much more

The modules of PlexMap

- PlexMap is geared to the requirements of your everyday work and therefore has a modular structure. From simple thematic maps to complex geo-portals - PlexMap offers you many possibilities. Discover the components of PlexMap:

Examples of use

Compose thematic maps

City map, public transport, points of interest, demographic change, solar map etc.

3D visualization of urban planning

Views, planning options, create and show flight routes and videos

Create and maintain a geo-portal

Present a comprehensive collection of 2D and 3D geodata, define user groups and users' permissions

Mobile Editing/Changesets

Create maps that allow for editing in the field and manage the resulting edits
